

GREAT NEWS FOR!

SCREEN PRINTERS AND EMBROIDERY BUSINESS OWNERS

WOULDN'T YOU LIKE TO PRODUCE THESE PRODUCTS ON COTTON?

We all know that sublimation requires polyester coating for mugs and other items but for fabrics it takes 100% polyester to obtain a decent image. When printing heat transfer onto cotton fabrics there is only one other company offering ink that prints a satisfactory image on cotton fabrics. However you must use their software to use their ink (money spent) and their paper (money spent) and their printer choice is expensive and then of course you must use their expensive ink to refill when the ink needs replacement.

But now there is a MUCH BETTER CHOICE!

"THE PRINTER BUDDY.COM #369 TRANSFER INK SUPPLY SYSTEM"

#1. Better in that our image is clearer, cleaner and crispier than the other choice.

#2. Better because you get almost twice the amount of ink for the money.

#3. Better because you don't have to purchase an expensive \$900.00 printer to use our Printer Buddy (continuous ink supply system).

#4. Better because replacement inks are a lot less money.

#5. Better because #369 Ink doesn't fade out or wash out guaranteed.

#6. Better because our Printer Buddy (continuous ink supply system) is compatible with 6 color or 4 color Epson printers including the Epson 1400 and not available with the other guys when using their continuous ink system.

NOT JUST ANOTHER INK! But clearer, cleaner and crispier images using #369 transfer ink is here now from Cherokee Images, a department within Cherokee Laser, a company dedicated to quality printing since 1990 (Guaranteed Absolute 1st Quality and we mean it!) We are sure you want the best FOR LESS. Twenty years of searching for better quality within the printing industry has led Cherokee Laser to this new and exciting product. It is formulated and patented and now available for your use in heat transfer. Images worthy of being proud of on COTTON FABRICS without polyester content when using #369 transfer ink. Think about it, CUSTOMERS WANT COTTON ALSO and NOT JUST POLYESTER. Now you can offer your customers a heat transfer OF YOUR GRAPHIC CREATIONS AND PHOTOS on cotton fabrics as clean, clear and crispy as your color photos and graphics offer without fuzzy out of focus images. #369 transfer ink has the quality you are missing now and wish you had and at A BETTER PRICE. No more burning multiple screens for multiple colors in one image with costly, time consuming silk screening for runs on light colored fabrics. No mess to clean up. Graphics and photos are placed on the cotton fabric as clear and crisp as the image is prepared.

Also, there are methods of choosing fabric color to fit the image that mean a lot as to the outcome. Black or dark fabrics are still not suitable for inkjet transfer (ask about our method used to place image onto black and dark garments) unless you are willing to pay \$20,000.00 for a "PRINT TO GARMENT" machine and still not get the upgrade enabling white print (that upgrade cost is \$16,000 more). Let's face it buying that machine is not a good business choice at all, but some people do buy it

and will never recover their purchase price before the machine wears out. This idea makes money for the company selling the machine not you the end user.

#369 transfer ink affords you the image maker to produce a clear image on your heat press in just 30 seconds. The paper is affordable at about 70 cents per sheet. I just filled an order yesterday for 9 shirts and 3 hats. I was able to get the job because there was a rack of pool balls in the image and a green felt background with lots of

different colors. Silk screen would not be affordable for the pool hall owner because of the cost of all those colors for the multiple screens in SETUP CHARGES. I was able to come back to my shop and within 3 hours I had his shirts and hats back to him. I charged him an affordable price because my total cost for each shirt was only \$4.00 including the shirt, paper and ink used. I made \$100.00 profit. Also, I will get his business from now on because the detail of the print was clear, clean and crispy. Now that I have his logo and design in my saved Corel files I can fill that same order in about 30 minutes. They were 100% cotton and he is selling them at \$20.00 each. "What a compliment to my Silk Screen Business! It enhances my business and offers my customers more choices. Now I can be truly competitive." If you are a serious silk screen business or embroidery business you need the Printer Buddy #369 Transfer ink System.

Embroidery and Silk Screening business owners know they are losing profit when they cannot offer what our quality heat transfer has to offer. Now is your chance to cash in on new technology heat transfer from Cherokee Laser.

Yes, it is SIMPLY AMAZING, BUT TRUE!
